

## OPTIMIZED COVERAGE FOR COMPOSTING EFFICIENCY

**Thrace Group's Nonwoven Compost Cover** is engineered to support effective composting by regulating temperature, retaining moisture, and reducing odors.

It serves as an insulating layer that helps maintain ideal conditions for microbial activity while minimizing nutrient loss and emissions — ensuring a cleaner, faster, and more controlled composting process.

### Insulation

The cover helps maintain optimal composting temperatures, ensuring pathogen destruction and efficient decomposition.

### Odor Control

Acts as a biofilter to reduce unpleasant odors by containing volatile organic compounds (VOCs) and managing emissions.

### Vector Protection

Serves as a barrier against pests such as flies, birds, and rodents, preventing contamination and preserving compost integrity.
